## What is Backbone?

MV\*

Library - **NOT** a framework

Models...Views...Collections...Templates... Router

# Philosophy

Backbone supplies a minimal set of highly effective tools which you can use in a variety of ways.

### Models

- Extend Backbone Model
- Get/Set not direct on property (set('FirstName', Bob))
- Fires Events on changes to data (filterable)
- URL to path where data is gotten

### Collections

Collection of Models

Extends backbone.Collection

**URL** 

Obviously works great with Underscore

## Controllers Views

Better to just look at the code

## Templates

Avoid Underscore Templating Pre-Compile Templates

Handlebars Example...

#### Routers?

Backbone comes complete with a pretty decent router.

Extends Backbone.Router (notice a pattern?)

#### Pros

- Non-Opinionated
- Modular
- Fast
- Browser Compatibility

#### Cons

- More code required
- Doesn't protect you from JQuery Soup
- Upgrades are often breaking
- JS Politics (& and Lodash are good alternatives)
- More code = more Tests necessary

# Q&A

Please feel free to contact me if you have any additional questions.
